

**SEASONAL VARIABILITY OF CARBON FLUX IN  
THE NORTH-EASTERN BAY OF BENGAL:  
SEASONAL CARBON ABSORPTION**

**Md Ariful Islam Milon**

Roll No.: 0120/03

Registration No.: 851

Session: 2020-2021

**A thesis submitted in the partial fulfillment of the requirements for the degree of  
Master of Science in Marine Bioresource Science**

**Department of Marine Bioresource Science**

**Faculty of Fisheries**

**Chattogram Veterinary and Animal Sciences University**

**Chattogram-4225, Bangladesh**

**AUGUST 2022**

## **Authorization**

I hereby declare that I am the sole author of the thesis. I also authorize the Chattogram Veterinary and Animal Sciences University (CVASU) to lend this thesis to other institutions or individuals for the purpose of scholarly research. I further authorize the CVASU to reproduce the thesis by photocopying or by other means, in total or in part, at the request of other institutions or individuals for the purpose of scholarly research.

I, the undersigned, and author of this work, declare that the **electronic copy** of this thesis provided to the CVASU Library, is an accurate copy of the print thesis submitted, within the limits of the technology available.

DEDICATED

TO

MY BELOVED PARENTS AND

FAMILY MEMBERS

## ACKNOWLEDGMENT

First and foremost, all the praises are for the almighty **Allah**, who gave me the ability and strength to accomplish this internship program along with the report due time.

I would like to convey my earnest gratitude to my parents, **Md Abdul Quddus** and **Mst Mahera Khatun**, who brought me into the light of earth and nursed me with all the facilities to be succeeded in life. Also, thanks to my other family members for their selfless love, blessing care, dedicated effort, valuable prayer, and continuous support during the academic period.

I sincerely express my intense gratitude to the honorable Vice-Chancellor, **Professor Dr. A.S.M Lutful Ahasan**, and **Professor Dr. Mohammed Nurul Absar Khan**, Dean, Faculty of Fisheries, Chattogram Veterinary and Animal Sciences University, for arranging and offering me all administrative support to complete my master's thesis research work.

The author would like to express his deepest sense of gratitude, profound regrets, and indebtedness to his research supervisor **Ms. Sumi Akter**, Assistant Professor, Department of Marine Bioresource Science, Faculty of Fisheries, Chattogram Veterinary and Animal Sciences University, for her co-operation, constant inspiration and indomitable guidance throughout the period of research work.

The author finds it a great pleasure in expressing his heartfelt gratitude to his research co-supervisor **Avijit Talukder**, Associate Professor, Department of Marine Bioresource Science, Faculty of Fisheries, Chattogram Veterinary and Animal Sciences University, for his sympathy, sincere cooperation, inspiration, fantabulous and well-planned guidance and valuable suggestions for the competition of the research work.

The author thankful from the core of my heart to **Mohammad Dr. Sadequr Rahman Khan**, Associate Professor and Head, Department of Marine Bioresources Science, Chattogram Veterinary and Animal Sciences University for his fantabulous, well-planned guidance and support during in the research period.

The author is glad to take the opportunity to express his heartfelt gratitude to all his other respected teachers of the Faculty of Fisheries, Chattogram Veterinary and Animal Sciences University, for their valuable teaching and encouragement.

The author would like to convey profound gratitude to **Mehrab Souhardya** and **Mishu Acharjee** for their support and valuable suggestions for completing the research work.

I also acknowledge the Lab assistants, Technicians, and other supporting staff of the Oceanography lab, the Faculty of Fisheries, Chattogram Veterinary and Animal Sciences University for their help and co-operation during lab work.

**The Author**  
**Md Ariful Islam Milon**

## ABSTRACT

Carbon dioxide emissions are the major contributor to global climate change. Increases of CO<sub>2</sub> in atmosphere rise surrounding environment temperature and ocean acidification. By photosynthetic activity phytoplankton are responsible to remove CO<sub>2</sub> from atmosphere. Globally 50% of carbon sinks into the ocean via process called biological pump. This research was conducted over four major seasons in the northeastern Bay of Bengal to measure the seasonal variation of carbon flux. An associated factor of carbon flux was the phytoplankton sinking rate determined by SETCOL method. The carbon flux showed that the monsoon season act as the major contributor to carbon flux ( $2.52 \pm 2.33 \text{ mg C m}^{-2} \text{ day}^{-1}$ ), followed by  $2.03 \pm 1.73 \text{ mg C m}^{-2} \text{ day}^{-1}$  in the winter season, whereas  $1.65 \pm 1.56 \text{ mg C m}^{-2} \text{ day}^{-1}$  and  $1.56 \pm 0.86 \text{ mg C m}^{-2} \text{ day}^{-1}$  found during pre-monsoon and post-monsoon season respectively. The data also demonstrated that the Kutubdia station exchanged more carbon than Cox's Bazar station. Carbon flux correlated with the turbidity, SiO<sub>3</sub>-Si, PO<sub>4</sub>-P, total suspended solids, plankton density, phytoplankton sinking rate, and carbon content. Carbon flux negatively correlated nutrients (NO<sub>2</sub>-N, NO<sub>3</sub>-N) and positively related with SiO<sub>3</sub>-Si, PO<sub>4</sub>-P. ANOVA test showed carbon flux significantly differs among depths [F (1, 2) = 3.811, p<0.05]. Carbon flux-related factor phytoplankton sinking rate significantly varied with depth change and ranged from 0.04 to 1.86 m day<sup>-1</sup>. Major seasonal carbon sinking rate was observed in the winter season as  $0.57 \pm 0.52 \text{ m day}^{-1}$ . Phytoplankton sinking rate was correlated with nutrients, salinity, total suspended solids, total dissolved solids, and conductivity. This research finding gives us an understanding of seasonal carbon flux variation contributed by phytoplankton and demonstrated daily carbon sequestration in the northeastern Bay of Bengal and correlated with various biogeochemical factors.

**Keywords: Phytoplankton, sinking rate, seasonal variation, carbon flux**
