

Acknowledgements

All praises and appreciation are for the almighty creators for blessing me with strength and patience and enabled me to pursue higher education and to bring this thesis in success.

First of all I want to acknowledge National Science and Technology (NST) Fellowship 2016-2017 of ministry of Science and Technology, Bangladesh for giving me the opportunity to take up this fellowship.

I express proud gratitude and respect to my teacher and research supervisor **Shireen Akhter**, Assistant Professor and Head, Department of Food Processing and Engineering, Faculty of Food Science and Technology, Chittagong Veterinary and Animal Sciences University, Chittagong for her guidance, encourage, suggestions and timely instruction throughout the period of research work and preparation of this thesis.

I also express proud gratitude and respect to The author also humbly desire to acknowledge heartiest appreciation and cordial thanks to my friend **Shamima Ahmed** , Lecturer Department of Food Processing and Engineering, Faculty of Food Science and Technology and **Nazmul Sarwar** , Lecturer Department of Food Processing and Engineering, Faculty of Food Science and Technology.

I feel proud in expressing my regard to my respected teacher **Md. Kauser-UL Alam**, Assistant Professor, Department of Food Processing and Engineering, Faculty of Food Science and Technology.

I have the highest regards to all participants who helped me for carrying out this research work properly and authority of Poultry Research Training Centre (PRTC) for constant co-operation.

I would like to thank my friends, who have supported me throughout entire process, both by keeping me harmonious and helping me putting pieces together. I will be grateful forever for your love.

2.15 Leather Drying	13
2.16 Methods of drying	13-15
2.16.1 Sun drying	13
2.16.2 Solar drying	14
2.16.3 Oven drying	14
2.16.4 Dehydrator drying	14
2.16.5 Microwave oven drying	15
2.17 Test for dryness	15
2.18 Packaging of fruit leathers	16

Chapter-3	METHODS AND MATERIALS	20-41
3.1	Preparation of fruit leathers	20-24
3.1.1	Materials and equipments	20-21
3.1.2	Preparation of mango pulp	21
3.1.3	Preparation of pineapple juice	22
3.1.4	Preparation of papaya pulp	23
3.1.5	Maintaining Composition for Preparing Four Samples	24
3.1.6	Process Flow Diagram for Preparing Mixed Fruit Leather	25-27
3.2	Product testing	27-41
3.2.1	Test for Raw Materials	27-29
3.2.1.1	Determination of Total Soluble Solid (TSS) for Raw materials	27
3.2.1.2	Moisture Content Determination	28
3.2.1.3	Determination of pH	29
3.2.1.4	Determination of Acidity as Citric acid (%m/m)	29
3.2.2	Physico-Chemical Analysis	30-37
3.2.2.1	Determination of moisture content	30-31
3.2.2.2	Determination of total minerals or ash (%)	31
3.2.2.3	Determination of Crude Protein by Kjeldahl Method	32-33
3.2.2.4	Determination of Crude Fat	33-34
3.2.2.5	Determination of total sugar	34-35
3.2.2.6	Determination of pH	36
3.2.2.7	Determination of Acidity as Citric acid (%m/m)	36
3.2.2.8	Determination of total soluble solids (TSS)	37

3.2.3 Mineral Content (Fe, Mg, Ca, K) Analysis	37-38
3.2.4 Microbial Analysis	39-41
3.2.4.1 Determination of Total Viable Count (TVC)	39-40
3.2.4.2 Fungal test	40-41
Chapter-4 RESULTS	42-47
4.1 Proximate composition of Raw Materials	42-43
4.1.1 TSS	43
4.1.2 Moisture	43
4.1.3 pH	43
4.1.4 Acidity	43
4.2 Proximate composition of prepared leathers	44-46
4.2.1 Moisture	45
4.2.2 Protein	45
4.2.3 Fat	45
4.2.4 Reducing Sugar	45
4.2.5 Ash	45
4.2.6 Fiber	45
4.2.7 Total soluble solid (TSS)	45
4.2.8 pH	45
4.2.9 Acidity	46
4.3 Mineral Content (Fe, Mg, Ca, K) in Final Product	46
4.4 Microorganism test result	45

Abstracts

The study was conducted on the development of the new product, mixed fruit leather recognized as sample F₁, F₂, F₃ and F₄. Where Mango, Pineapple, Papaya were the key ingredients. The present study was concerned with the development mixed fruit bar and its nutritional quality evaluation. The purpose of this study was to analyze the nutritional composition of mixed fruit leather. In this study mixed fruit leather was produced using Papaya, Pineapple, Mango and other raw materials. Attempt was made to produce fruit leather without adding colors and flavors. Sodium Benzoate 0.25% was used for preserve. Brix value of fruit puree was 26.13 and titratable acidity of the fruit puree was checked. Quality of the final product was evaluated by proximate analysis and microbial analysis. Moisture content, pH value, Total fat content, Fiber content, Ash content and Sugar content was tested. Total plate count and total mold count was tested as microbial analysis. Total plate count showed negative result but total mold count showed positive result. Moisture content was varied for different samples (10.25-13.33)% and pH value of the final product was varied for different samples. Fruit leather contain very less fat content (0.03%) and free fat content (0.025%). It contain high amount of fiber (6 %) and less ash (0.02%) and acid insoluble ash content (0.0016%). Fruit leather contain 11% of reducing sugars. Fruit leathers are simple low cost, healthy product that can be made in domestically.

Keywords: Mango Leather, Nutritional Quality, Microbial Analysis, Keeping Quality.
