Appendix 14: The most common medication schedule for Indian Peafowl in Bangladesh National Zoo

The most common medication based on diseases was implemented is as follows: In case of omphalytis- oxytetracycline -5-7 days

In case of weakness – Multivitamin and Mineral solution -5-7 days

In case of parasitic infestation- Piperazine citrate/ albendazole/ fenbedazole / single dose or some time double doses

In case of coli enteritis- Doxicycline+Colestin-5-7 days

In case of salmonellosis- oxytetracycline -5 days

In case of Mycoplasmosis/Infectious bronchitis- Doxicycline+Colestin- about one week

In case of coccidiosis- Sulphaclozine sodium monohydrate- 3-5 days

In case of bumble feet- Iodine swabbing and oxy tetracycline- 5 days

In case of curled toes- Vitamin B₁₂₆-5-7 days

In case of wound – Iodine or potassium permanganate solution as antiseptic- up to required time

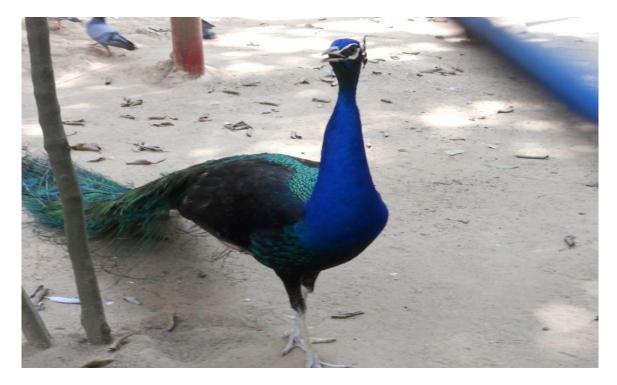

But in case of surgery – inject .5 ml oxtetracycline for -4-5 days and dressing properly by antiseptic solution.

| Differences in several varieties | | |

Appendix 37: The format of questionnaire for breeding related data collection of Indian Peafowl in Bangladesh National Zoo

| Breeding Parameters | |
|----------------------------------|--|
| Dimorphic or monomorphic | |
| Dimorphic of monomorphic | |
| Age of sexual maturity | |
| Breeding season | |
| Male nature in breeding season | |
| Female nature in breeding season | |
| Displaying time | |
| Egg laying season | |
| Male and female ratio in a house | |
| First laying age | |
| Lek formation | |
| Clutch size | |
| Laying interval | |
| Egg weight | |
| Egg color | |
| Egg shape | |
| Egg size | |
| Fertility | |
| Hatchability | |
| Incubation temperature | |
| Incubation humidity | |
| | |

| Continue | |
|--------------------------------------|--|
| Incubation period | |
| Artificial incubation | |
| Natural incubation | |
| Support for good breeding | |
| Non breeding season | |
| Date of setting eggs | |
| Date of Chicks brood | |
| Number of brood chicks | |
| Candling time of incubated eggs | |
| Candling procedure of incubated eggs | |
| Why candling of incubated eggs | |

Appendix 38: Format of questionnaire for feed, feeding ecology and habitat of Indian Peafowl in Bangladesh National Zoo

| Feeds and feeding ecology | |
|---|--|
| Source of collection of feed | |
| Amount of feed supply per day | |
| How many times per day | |
| Main feed ingredients | |
| Supporting feed ingredients | |
| Amount of feed ingredients | |
| Feeds eaten from nature | |
| Amount of supporting feed ingredients | |
| When feed supply in the day? | |
| Where feed supply in the house? | |
| Amount of water per day | |
| What are the forms of feeds? | |
| The largest part of feed ingredients | |
| Why use layer feed? | |
| Common spinaches | |
| Common fruits | |
| Why supply ground nut? | |
| Why supply eggs? | |
| When start the feed supply based on ages? | |
| | |

| Continue | |
|---|--|
| Which form of feed supply based on ages? | |
| Start of several feeds based on age | |
| Age based form of feeds | |
| Name of feed supplied utensil | |
| Name of water supplied utensil | |
| Places of several feed ingredients supply | |
| Which feed like more | |
| Extra nutrient supplements | |
| Vitamin mineral supplements | |
| When supply extra nutrient supplements | |
| When supply vitamin mineral supplements | |
| When start the layer starter feed | |
| When start the layer layer feed | |
| Free from feed day | |
| Amount of feed supply based on age | |
| Some exceptional intake feed | |
| Visitors supplied feed | |
| Supplied feed on floor | |
| Feed supply time | |
| Feed supply interval | |
| Manner of feed intake | |
| Does any feed intake from roosting condition? | |

| Continue | |
|--|--|
| Habituated with several types and form of feeds. | |
| Feed intake based on season | |
| Which feed choose based on seasons? | |
| Why supply seasonal fruits? | |
| Habitat | |
| How many types of houses | |
| Place of houses | |
| Shape of houses | |
| Size of houses | |
| Roosting materials in houses | |
| Roosting site in the houses | |
| Several tress in houses | |
| Floor condition of houses | |
| Feed and water supply space of houses | |
| Materials of house making | |
| Shadow site in the house | |
| Roof of houses | |
| Resting Place in the house | |
| Egg laying place in the houses | |
| Extra things in the houses | |
| Why need roosting materials in the house? | |
| Why need shadow place in the house? | |

| Continue | |
|---|--|
| Drainage system in the houses | |
| Is there any fruits tree in houses? | |
| Most of roof and fencing part of houses. | |
| Length of houses | |
| Width of houses | |
| Height of houses | |
| How many Peafowl's in the house | |
| Is there any subdivisions in the houses | |
| Does supply any basket in laying season? | |
| Is there any resting and egg laying site in houses? | |
| Why support by the housing? | |

Appendix 39: Format of questionnaire for disease conditions, abnormalities and its managements procedure for Indian Peafowl in Bangladesh National Zoo.

| Diseases , abnormalities and predators | |
|---|--|
| Common diseases | |
| Uncommon diseases | |
| Most important disease | |
| How many types of diseases break down | |
| Most risky disease | |
| Disease of early stage | |
| Disease of late stage | |
| Disease prone age | |
| Seasonal diseases | |
| Infectious diseases | |
| Non infectious diseases | |
| Common abnormalities | |
| Uncommon abnormalities | |
| How many types of abnormalities | |
| Organ related abnormalities | |
| Hot environmental abnormality | |
| Cool environmental abnormality | |
| Visitor related abnormality | |
| Most common predators in environment | |
| Several types of predators | |
| Enlisted predators | |
| Uncommon predators | |
| How diagnosis disease from live? | |
| How diagnosis disease from dead? | |
| Is there any disease enlisting procedure? | |
| What are the problems of more handling of wildlife? | |

| Continue | |
|--|--|
| Did you find any critical no diagnostic disease? | |
| Management procedure | |
| What is the main measure of disease prevention? | |
| What about the routine cleaning of houses? | |
| What about the drainage system of houses? | |
| What about feed store room? | |
| What about good quality feed supply? | |
| What is the most common vaccine used? | |
| What is the newly recommended vaccine? | |
| Which vitamin and mineral commonly supply? | |
| Some feed supplement also used for prevention. | |
| Which feeds? | |
| Prevention measure based on season. | |
| Prevention measure based on age group. | |
| Prevention measure based on disease break down. | |
| Prevention measure based on availability of drugs. | |
| Prevention measure based on availability of vaccine. | |
| Routine use of antiparasitic drugs. | |
| Which antiparasitic drug is used? | |
| What is the common treatment line for disease control? | |
| Which drug is very common for controlling? | |
| Why glucose supply? | |
| Why Vitamin-c supply? | |
| Why Vitamin-B complex supply? | |
| Why calcium supply? | |
| Why amino acid supply? | |
| Why Vitamin-Mineral supply? | |
| Is there any routine checkup system? | |
| How control visitor's disturbances? | |

| Continue | |
|---|--|
| What is the main measure of predator's control? | |
| Was any problem faced by predators? | |
| What types of predators are available? | |
| Is there any complicit with predators and peafowl? | |
| Is there any veterinary hospital? | |
| What are the components of veterinary hospital? | |
| What types of drugs are available in veterinary hospital? | |
| What are the main functions of veterinary hospital? | |
| Importance of veterinary hospital in zoo? | |
